Metal-on-Metal Total Hip Replacement By Dr. John Rogerson

Big Femoral Head (BFH) Stemmed Prosthesis

There are a variety of conditions that can lead to hip joint deterioration resulting in pain, reduced range of motion and decreased quality of life. Those conditions include:

- Osteoarthritis
- Rheumatoid Arthritis
- Osteonecrosis
- Traumatic Arthritis
- Non-Arthritic Trauma

As a treatment option, Dr. Rogerson may recommend total hip replacement surgery with a hip implant from Wright. Recent technology advances for hip surgery are the CONSERVE® Total Hip System with BFH® Technology, and the minimally-invasive PATH® Technique.

For decades Wright had been the industry leader, pioneering new and better ways to address hip joint replacement - which is why Dr. Rogerson has put his trust in Wright. The prospect of hip replacement surgery is an important choice for all patients, so this information is provided as a resource to enable you to learn more about technologies and techniques of hip replacement surgery.
